

Inaugural Lecture of

Lecture Series on IPR For Sustainable Transition

Under the aegis of DST-Centre for Policy Research

IPRs and the International Transfer of Climate Change Mitigation Technologies

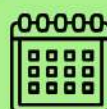

About the Lecture

The lecture opens a dialogue on the use of intellectual property rights (IPRs) in climate change mitigation technologies (CCMTs). IPRs play an ambiguous role determining technology transfer as strong IPRs can enable a market expansion effect but they may also strengthen monopoly power. Hence, the international transfer of CCMTs to developing countries has increasingly become a contentious policy issue. In this lecture, we look at the debates around the international transfer of CCMTs in the context of developing countries.

Speaker

Prof. Suma Athreye
School of Public Policy
